Target Career: Data Engineer

Alex wants to start as a (Junior) Data Engineer at a German tech company after graduation, building and operating data pipelines.

Typical role requirements (from current job postings)

Must-have:

1. Strong SQL and data modeling (warehousing, dimensional models)
2. Python for data processing
3. ETL/ELT pipeline design and orchestration (e.g. Spark, Airflow)
4. Experience with at least one cloud platform (AWS, Azure, or GCP)
5. Data warehouse / data lake architectures

Nice-to-have:

1. Stream processing (Kafka, Flink)
2. MLOps basics (model serving, monitoring)
3. Docker and Kubernetes
4. Dashboarding and data storytelling
5. Agile teamwork experience
